Crop Disease Detection Report

Generated on March 26, 2026 | 10:21 AM

Disease Detected	Pepper - Bacterial Spot
Confidence Score	91.4%
Confidence Level	High
Analysis Status	Complete

Analyzed Leaf Image

Symptoms

Small dark spots on leaves and fruits, yellow halos around spots, leaf drop, fruit lesions reduce marketability

Causes

Xanthomonas bacteria, warm humid weather, water splash, contaminated seeds, temperatures 75-86°F

Treatment Methods

Remove infected leaves, apply copper-based bactericides, improve air circulation, avoid overhead watering

Preventive Measures

Use disease-free seeds, practice crop rotation, maintain plant spacing, remove plant debris, disinfect tools

Recommended Pesticides

Copper hydroxide, Copper sulfate, Streptomycin (early stages), Apply every 7-10 days

Organic Solutions

Neem oil spray, Copper soap, Bacillus subtilis, Proper sanitation, Resistant varieties
